EDUCATION

Stevens Institute of Technology | Hoboken, New Jersey

September 2023 — May 2025

Master of Science (MS), Computer Science

GPA: 3.9/4

- Web & Media Graduate Assistant at Hanlon Financial Systems Center

Manipal University Jaipur | Jaipur, India

July 2019 — July 2023

Bachelor of Engineering (BE), Information Technology

CGPA: 8.62/10

SKILLS

Languages:	Python, TypeScript, JavaScript, Java, Go, SQL, C/C++
AI & ML:	RAG, Hybrid Search, Cross-Encoder Reranking, AI Agents, Multi-Agent Orchestration, MCP, LLM Evaluation, Guardrails, Prompt Engineering, NLP
AI Frameworks:	LangGraph, LangChain, LlamaIndex, DeepAgents, DeepEval, RAGAS, Langfuse, Microsoft 365 Agents SDK
Backend & Frontend:	FastAPI, Node.js, Express.js, React, Next.js, Spring Boot, Angular
Databases:	PostgreSQL, pgvector, Redis, Elasticsearch, MySQL, MongoDB, Qdrant, LanceDB, Supabase
Cloud & DevOps:	AWS, Azure, Docker, Git, GitHub Actions

EXPERIENCE

Future Path AI

January 2024 — Present

Founding Software Engineer

Cupertino, CA

- Architected **AI agent infrastructure** for an enterprise platform autonomously resolving business and IT operations at **Fortune 500 pharma and finance clients** — built the multimodal RAG layer with hybrid retrieval (**pgvector + BM25 via RRF**), cross-encoder reranking, and a vendor-agnostic embedding layer over **10K+ documents**.
- Built **agent and RAG evaluation pipelines** using DeepEval, RAGAS, and Langfuse — 200+ per-client test cases across tool-use reliability, task completion, faithfulness, and context precision — driving **model selection** and **prompt iteration** across OpenAI, Anthropic, and Gemini etc.
- Developed a **multi-agent orchestration platform** on LangGraph and DeepAgents with **manifest-driven agent definitions** (config-as-code) — leveraging planning loops, sub-agent delegation, and file-system context management to autonomously execute multi-step IT and business operations workflows.
- Architected an **MCP orchestration layer** spanning 80+ enterprise integrations (ServiceNow, Kubernetes, Splunk, Dynatrace, Azure, SAP, Salesforce) with **multi-tenant credential injection** and dynamic per-query skill selection — powering LangGraph autonomous AI and chat agents handling 100+ tickets daily across ITSM, observability, and ERP workflows.

Nagarro

March 2023 — July 2023

Software Engineering Intern

Gurugram, India

- Built a **full-stack product community web application** end-to-end using **Java, Spring Boot, Hibernate, MySQL, and Angular**, delivering modular services for user registration, product browsing, and review management.
- Designed and implemented **RESTful APIs** with Spring Boot for user authentication, product search, and review workflows, applying caching and connection pooling to optimize response latency.
- Engineered **Hibernate ORM data models** with MySQL — relational schema design, lazy loading, and indexed queries for product and review entities.
- Developed **responsive Angular interfaces** with component-based architecture, reactive forms, and client-side state management for product browsing and review submission flows.

PROJECTS

PitchPilot – AI-Powered Investor Pitch Analyzer & Coach | [GitHub Link](#)

Mar 2025 — May 2025

- Built **PitchPilot**, a solo AI coaching platform helping startup founders refine pitch decks through automated analysis, real-time **voice and chat investor simulation** via the **OpenAI Realtime API**, and feedback grounded in Y Combinator pitch heuristics.
- Designed multi-agent workflows on **FastAPI and LangGraph** with persistent state, ingesting PDF/PPTX/DOCX decks via a document parsing pipeline backed by **PostgreSQL, Prisma, and Supabase Storage**.
- Engineered an **LLM-driven PDF and PPTX generation pipeline** using few-shot prompting against curated benchmark decks to produce polished revisions and coaching reports for founders.

Pawpal | [GitHub Link](#)

March 2024 — May 2024

- Built a **full-stack pet services platform** on **Node.js, Express, MongoDB, and React** — supporting pet adoption, provider matching, and appointment scheduling through Mongoose-modeled schemas and RESTful APIs.
- Implemented **secure authentication** with bcrypt salted hashing, express-session server stores, and **OTP-based password recovery** with token expiration and rate-limited endpoints.
- Built community features — threaded comments, review analytics, and booking flows — powered by **MongoDB aggregation pipelines** for review scoring and ElasticEmail for transactional notifications.
